Stakeholder Responses, Problems, and Expectations

Based on the research conducted on the **Mess Management System**, the following key stakeholder responses, problems, and expectations have been identified:

1. Students via Google Form

Problems Faced:

- Long queues and **delays in meal distribution**.
- **Errors in billing and attendance** leading to overcharging. • **Lack of meal customization**, forcing students to take meals they don't want.
- **Inconvenient complaint resolution** process.
- **Food wastage due to fixed meal plans**.

- **Lack of transparency** in mess fee calculations.

Expectations:

- **Pre-booking meals** to avoid food wastage.
- **A transparent billing system** with real-time tracking.
- **Customizable meal plans** (vegetarian/non-vegetarian options).
- **Faster meal distribution** through an automated system.
- **User-friendly mobile/web interface** for meal management.
- **Efficient complaint management** with quick resolution.

Staff (Cooks & Waiters) via Focused Group Discussion

Problems Faced:

- **Unpredictable demand** leading to food wastage or shortages.
- **Difficulty in tracking student attendance** for meals.
- **Manual errors in meal counting and inventory tracking.**
- **Delayed payments or disputes over billing.**
- **Lack of structured feedback** from students regarding food quality.

Expectations:

- **Automated meal tracking** for better food preparation planning.
- **Integrated inventory management** to reduce food waste.
- **Digital record of meal consumption** to ensure accuracy in billing.
- **Structured feedback system** to improve meal quality.
- **Easier coordination** between staff and mess administrators.

3. Mess Accountant & Mess Supervisor via Interviews

Problems Faced:

- **Difficulty in managing finances and transactions** related to mess bills.
- **High number of complaints regarding food, billing, and hygiene.**
- **Lack of data analytics** to track consumption trends.
- **Manual record-keeping** causing inefficiencies and inaccuracies.

Expectations:

- **Automated mess billing system** with real-time transaction tracking.
- **Complaint tracking system** for improved service management.

- **Data-driven decision-making** through analytics on food consumption.
- **Better resource allocation** based on meal demand.

4. Google Form Responses

2. Have you ever faced errors in mess attendance due to the manual register system?

9. What features would improve your **overall mess experience**?
 Copy chart

48 responses

10. What **features** would you like in the Central Mess Management System Software?

28 responses

Online Mess in/out and billing features

In,out features , pay challan, view history, mess menu , suggestions to change menu, mess complaints option, report error, etc

I would like digital mess in/out system from an app/website as sometimes we forget to go to mess and with less time we can in/out our mess.

Second the online system should show current mess in days for a month and a record of mess history and bill payments along with any late due fees. there should also be an online debit/credit card mess payment system so eliminate the hassle of visiting the banks or offices for the payment of mess bills

GUI

All the features that I mentioned above.

In and Out

options to choose menu and the number of meals and how much they will cost
